

The "Mini-Shut"™ Nozzle Tip Installation Guide

The "Mini-Shut" Nozzle Tip is comprised of Four Major Components:

1. Body
2. High Temperature Belleville Springs
3. Poppet
4. Seat

The Unit is Assembled at the Factory with the Belleville's aligned in a specific pattern and the Seat is retained in position with an adhesive. When the Nozzle tip is threaded into the Nozzle Body, the Seat is compressed and a Pre-Load is applied to the Springs.

Do not Disassemble before use!
The Belleville's are aligned in a specific pattern.
